The Canadian Government has announced that its Breach of Security Safeguards Regulations are in effect as of November 1, 2018. This means that beginning on that date, companies who suffer a data breach that affects Canadian subjects must meet defined requirements governing how and when they must notify Canada’s Office of the Privacy Commissioner and affected individuals of the breach.

These new requirements further emphasize the importance of preventing breaches of personal and sensitive information. Having a multifaceted strategy for network and information security is important to breach prevention. Barracuda’s leading security products offer strong protection against breaches and auditability of access and information.

Barracuda: Helping Two Ways

Barracuda’s integrated suite of security solutions work together to protect critical points of exposure from intrusion attempts that may result in a breach. In addition, Barracuda’s suite of products help you with data recovery and analysis in the event a breach does occur.

Barracuda security and data protection solutions include detailed and customizable logs, reports, and dashboards. They make it easier for you to analyze, remediate, and notify quickly in the event of a data breach or other security incident.

The Bottom Line

Barracuda’s state-of-the-art security and data protection solutions give you the tools and capabilities you need to effectively prevent the vast majority of potential data breaches.

And if a breach does occur, these same solutions give you the ability to quickly and easily gather the information required for compliant notification.

Barracuda solutions ensure that complying with notification requirements is as easy and non-disruptive as possible, without consuming large amounts of IT resources and staff time.
