Barracuda CloudGen Firewall for Azure

Protecting your digital assets in Microsoft Azure

The growth in cloud computing capabilities and services has driven more data into places where traditional IT security measures cannot reach - into data centers not owned by your corporate IT group. Beyond its powerful network firewall, IPS, and VPN technologies, Barracuda CloudGen Firewall integrates a comprehensive set of next-generation firewall technologies, including comprehensive application control, availability, and quality-of-services (QoS) features.

Granular application control
Barracuda CloudGen Firewall gives administrators granular control over applications, allowing them to define rules for forwarding data traffic using the best respective transmission channels based on type of application, user, content, time of day, and geographical location. Barracuda CloudGen Firewall allows organizations to prioritize traffic by limiting or restricting access to non-business-related applications and network traffic, even when encrypted.

Integrated next-generation security and connectivity
Barracuda CloudGen Firewall's intrusion detection and prevention system (IDS/IPS) strongly enhances network security by providing complete and comprehensive real-time network protection against a broad range of network threats, vulnerabilities, exploits, and exposures in operating systems, applications, and databases preventing network attacks such as SQL injections and arbitrary code executions.

Barracuda CloudGen Firewall incorporates advanced site-to-site and client-to-site VPN capabilities, using both SSL and IPsec protocols to ensure remote users can easily and securely access network resources without complex client configuration and management.

Cloud automation
The big advantage of going to the cloud goes beyond cost savings but in greater agility and flexibility, enabling adoption of a DevOps/Agile methodology, and of cloud-native constructs and automation. Development and deployment processes in the cloud show drastic improvements over on-premises deployments and, thus, require high levels of automation and scripting. All of the components, including infrastructure for security and connectivity, need to adapt to the way this works in the public cloud via API or scripting.

Barracuda CloudGen Firewall provides fully automated protection across multi-cloud deployments, including VPN automation across multiple cloud providers, on-site and virtual.
Technical specs

**Firewall**
- Stateful packet inspection and forwarding
- Full user-identity awareness
- IDS/IPS
- Application control and granular application enforcement
- Interception and decryption of SSL/TLS encrypted applications
- Antivirus and web filtering in single pass mode
- Email security
- SafeSearch enforcement
- Google accounts enforcement
- Denial of service protection (DoS/DoSb)
- Spoofing and flooding protection
- ARP spoofing and trashing protection
- DNS reputation filtering
- NAT (SNAT, DNAT), PAT
- Dynamic rules / timer triggers
- Single object-oriented rule set for routing, bridging, and routed bridging
- Virtual route test environment
- Network security orchestration with tufin SecureTrack

**Protocol support**
- IPv4, IPv6
- BGP/OSPF/RIP
- VoIP (H.323, SIP, SCCP [skinny])
- RPC protocols (ONC-RPC, DCE-RPC)
- 802.1q VLAN

**Infrastructure Services**
- DHCP server, relay
- SIP and HTTP proxies
- SNMP and IPFIX support
- JSON lifecycle automation API
- Auto VPN via API and script control
- DNS cache
- Built-in support for Azure Virtual WAN

**VPN & Zero Trust Access**
- Drag & drop VPN tunnel configuration
- Network access control
- iOS and Android mobile device VPN support
- Two-factor authentication via timebased one-time passwords (TOTP), Radius, or RSA MFA (requires an active Advanced Remote Access subscription) for VPN and NAC clients
- Multi-factor authentication for SSL VPN and CudaLaunch
- Barracuda CloudGen Access support - CloudGen Access
- Barracuda CloudGen Access Proxy service included with every CloudGen Firewall for quick Zero-Trust-Access rollout

**Central management options via Barracuda Firewall Control Center**
- Administration for unlimited firewalls
- Support for multi-tenancy
- Multi-administrator support & RCS
- Zero-touch deployment
- Enterprise/MSP licensing
- Template & repository-based management
- REST API

**Intrusion detection and prevention**
- Protection against exploits, threats and vulnerabilities
- Packet anomaly and fragmentation protection
- Advanced anti-evasion and obfuscation techniques
- Automatic signature updates

**Self-Healing SD-WAN**
- Optimized direct internet uplink selection
- Internet uplink optimization (forward error correction)
- FIPS 140-2 certified cryptography
- On-demand direct VPN tunnel creation between remote spoke locations based on application type
- Dynamic bandwidth detection
- Performance-based transport selection
- Application-aware traffic routing (VPN, ExpressRoute)
- Adaptive session balancing across multiple uplinks
- Application-based provider selection
- Traffic shaping and QoS
- Built-in data deduplication

**Support options**

**Barracuda Energize Updates**
- Standard technical support
- Firmware updates
- IPS signature updates
- Application control definition updates
- Web filter updates
- Barracuda CloudGen Access support

Support for Azure specific

- Full Azure Virtual WAN support
- Log File Streaming to Azure OMS

Available options

**Barracuda Firewall Insights**
Consolidates security, application flow, and connectivity information from hundreds or even thousands of firewalls on the extended wide area network – regardless of whether they are hardware, virtual, or cross-cloud-based deployments.

**Malware Protection**
Provides gateway-based protection against malware, viruses, spyware, and other unwanted programs inside SMTP/S, HTTP/S, and FTP/S traffic.

**Advanced Threat Protection**
Prevents from network breaches, identifies zero-day malware exploits, targeted attacks, advanced persistent threats and other advanced malware.

**Advanced Remote Access**
Provides a customizable and easy-to-use portal-based SSL VPN as well as sophisticated Network Access Control (NAC) functionality and CudaLaunch support.
